Purpose of the application

Our project aims at closing the gap between languages. The idea is to let a person have multiple translations to a given text, used and shared by our community.

Main features

- Request a translation to a given text.
- Translate texts for other people.
- Receive, compare and evaluate different translations.
- Search translations.

Web Services

- 3rd Party Web Services
    - API Facebook
        - Login service
    - API Google+
        - Login service
    - Firebase
        - Login service
        - Database
        - AdMob
        - Notifications
- Provided services

- Manage translations
    - Add text
    - Translate
    - Receive translations

Target Platforms

Java standalone application for Mobile Device (Android)

Additional Services and Improvements (if time permits)

To enhance user experience, rating users and translations would be desirable. Furthermore, the security and scalability will be taken into account.
